## Patients' Library and Children's Library iPads

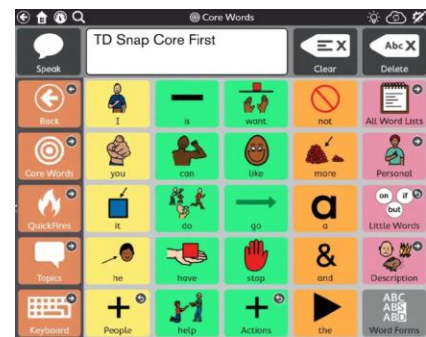

### TD Talk

TD Talk is a speech generating app for literate adults with communication disabilities such as ALS/MND, multiple sclerosis, muscular dystrophy, and cerebral palsy. It empowers people to talk using just their eyes or fingers. Available in many languages.

### TD Snap

TD Snap is a flexible software offering professionals and families a choice of AAC solutions. Includes Core First, Motor Plan, Express, Text, and Scanning Page Sets.

## Patients' Library and Children's Library iPads

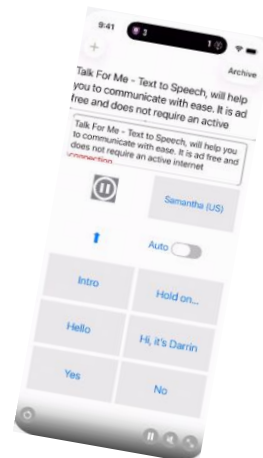

### Spoken

Spoken is an app designed for people unable to use their voice due to nonverbal autism, aphasia, stroke, or other speech and language disorders.

### Talk for Me

Type in the main text area or tap one of the six main custom buttons, and the iPad will read it aloud. During FaceTime audio calls, the spoken text will automatically be heard on the other caller's phone or iPad. Available in many languages.
