# UI CARELINK:

## COMMUNICATION AND COORDINATED CARE SERVICES FOR REFERRING PROVIDERS

When you refer a patient to University of Iowa Health Care, you are placing trust in us. Providing the best medical care—and coordinating and communicating your patient’s care with you—is a privilege and a responsibility we take seriously. UI CareLink provides physicians and other health care providers who refer patients to UI Health Care a secure and up-to-date online resource for following your patient’s treatment and progress.

### UI CARELINK BENEFITS

**View medical records**, including procedure notes, surgery reports, clinic notes, medications and lab results.

**Download patient records**, related to your referral that can be printed or imported into your electronic medical record.

**Upload patient records** and information

As a registered UI CareLink user, you will have access to your patient’s electronic health information related to treatment with University of Iowa Health Care. Provider groups are responsible for identifying staff who would benefit from access to UI CareLink.

### ESTABLISHED RELATIONSHIPS

A relationship is established when a provider from the provider group is listed as the primary care or referring physician during a visit to University of Iowa Health Care. Our staff will verify this information with the patient at the time of arrival for the appointment.

Once the relationship is established, the provider group will begin receiving notifications through UI CareLink. Specific medical information for those patients who have listed you as their referring provider in our system will be available to your provider group for 90 days following the last referred encounter with University of Iowa Health Care.

It is important that you stress to your patients before their appointment with University of Iowa Health Care that they need to confirm that you are their referring or primary care physician, using your name. Facility or group practice will not provide the verification necessary. Patients will be asked to confirm this information at the time of scheduling and upon arrival at every appointment. Without that confirmation, you will not be able to access their records through UI CareLink.

#### LEARN MORE ABOUT UI CARELINK
